MestReNova Installation on PC

Plug into a hardwire connection somewhere on campus (the library has some available Ethernet ports).

Click on the startup button at the bottom left corner of your computer. In the text box that appears right about that, type \Alchemist\Mnova

(For windows 8 the box may be somewhere else)

A window should appear asking for a username and a password

In username type: \232L

Password: 232L

You should have a folder Mnova open up with MestReNova files in it.

Click the one with the .msi extension to install MestReNova on your computer.

After installation is complete copy the 3 .lic files and place them in the following location on your computer

C:\Program Files (x86)\Mestrelab Research S.L\MestReNova\licenses

Open MestReNova. If you did everything right, it should not prompt you to install license files. If that didn’t work, you may need to first copy the license files to your desktop and then copy and paste them in the above folder.

Laptop users who want to use the software off campus must reconnect to campus network and relicense the software every 90 days. The server can be accessed via the wireless network using CofC secure connection also so students will have access.
